DAILYSNARE

MORE COMFORT AND RELIABILITY IN EVERYDAY HOSPITAL ROUTINE

In order to make the removal of polyps in everyday hospital routine as efficient as possible, MICRO-TECH has developed a program of disposable polypectomy snares which perfectly combines quality with cost effectiveness. Each

snare is made of specially stranded wire, with enduring radial force, high dimensional stability and precise cutting properties. The 3-ring handle offers a secure hold and transmits every movement reliably to the snare.

SPECIFIC CHARACTERISTICS

- Very comfortable to use
- Reliable and safe
- Innovative HF-connection
- Ergonomic 3-ring handle
- Excellent cutting properties
- High strength of shape
- Strong price-performance ratio

SUCCESSFUL IN PRACTICAL USE

The special stranded wire of DailySnare endows the snare with the radial force it needs to open and be controlled in any position, easily and reliably. DailySnare has proved its worth as a reliable solution in daily routine work owing to its enormous dimensional stability and good cutting properties. Thanks to the new handle the snare can easily be opened and closed even if connected to the HF-cable.

COLDSNARE

RELIABLE RESECTION OF POLYPS $\leq 9\text{MM}$

The Coldsnares from MICRO-TECH is an instrument that is suitable above all for cold resection of polyps $\leq 9\text{mm}$. This thin, braided cutting wire and its 0.23 mm wire thickness were specially developed for cold resection and makes for a highly precise, clean cut in combination

with the snare design optimized for excision of small polyps. The excised polyp is free of thermal defects and ensures that the histological assessment will provide valuable information.

SPECIFIC CHARACTERISTICS

- Compliant with guidelines for polyps $\leq 9\text{mm}$
- Special cutting wire
- Optimized snare design
- Precise, uniform cut
- High level of control
- Ergonomic grip

Precision grip with ergonomic design

LESIONHUNTER COLDSNARE

EFFICIENT AND PRECISE RESECTION

The LesionHunter Coldsnares expands MICRO-TECH's portfolio with a highly stable and precise cold resection solution. The snare features a rotatable nitinol loop that maintains its oval shape even after multiple resections, ensuring consistent tissue capture. The ultra-thin 0.18-mm

nitinol wire smoothly separates the tissue and the polyp, leaving the polyp in the resection bed so it can be easily found and removed. The LesionHunter Coldsnares is available in three snare diameters – 10, 15 and 20 mm – and thus offers the right solution for many polyp sizes.

SPECIFIC CHARACTERISTICS

- Rotatable, dimensionally stable snare for increased durability
- Thin nitinol wire for a clean cut
- Wrapped metal catheter for more stability during resection
- Ergonomic 3-ring handle for precise control
- Removed tissue remains in the resection bed and is easier to find

In contrast to traditionally braided cold snares, the LesionHunter snare consists of a 0.18-mm thin monofilament nitinol wire.

Removing small polyps with a cold snare can reduce the risk of delayed bleeding.

The three available snare diameters allow the selection of a snare that completely encloses the polyp. As a result, a safe distance from healthy tissue around the resection site can be achieved after the resection.

The LesionHunter Coldsnares reliably encloses the polyp, and its ultra-thin 0.18-mm monofilament nitinol wire ensures a clean cut.

Every movement of the ergonomic handle is transferred directly to the snare – for precise rotations and secure cuts.

GOLDKNIFE

ELECTROSURGICAL PRECISION WITHOUT CHANGING INSTRUMENTS

The GOLDKNIFE from MICRO-TECH allows for effective and reliable endoscopic submucosal dissections. Thanks to the combination of water-jet and electro-surgery, all working steps - marking (with the exception of the IT type), injection, dissection and coagulation – can be performed without switching instruments. The high-pressure water jet combined with electrosurgery creates a submucosal

pillow of water that allows replenishment at any time to protect against thermal and mechanical injuries. The handle facilitates a smooth and seamless extension of the knife. The balanced rigidity of the tube also enables precise knife guidance. Choose from four different knife tips with different cutting and coagulation properties.

SPECIFIC CHARACTERISTICS

- Water jet combined with electrosurgery
- Independent marking (with the exception of the IT type), injection, dissection and coagulation without switching instruments
- Replenishing the water pillow (optional) while dissecting and resecting
- 4 different knife types

Type I: Great freedom of movement, versatile, higher level of difficulty

Type T: Ideal for removing under tension. Better coagulation options and optimized cutting direction while dissecting

Type O: Crescent-shaped tip maximizes coagulation effect

Type IT: The 1.6 mm insulated ceramic tip minimizes the risk of perforation and thus enables safe dissection

SURETRAC

BETTER VISIBILITY IN ESD PROCEDURES

The MICRO-TECH Traction Device 'SureTrac' offers a practical and proven method for supporting ESD procedures in the gastrointestinal tract. With the well-established LOCKADO™ clip and the elastic silicone band, the preloaded system enables efficient tissue tension and improves the view of the dissection area. The traction is achieved by

hooking a second clip into one of the four available rings. The four rings allow individual adjustment of the span and can be readjusted during the procedure. SureTrac is a functional system that enables easy handling and effectively supports the clinical workflow.

SPECIFIC CHARACTERISTICS

- Preloaded traction system
- Elastic, latex-free silicone band with four rings
- Small retaining ring secures silicone band to the clip arm
- Improved view of the resection area

The ergonomic handle ensures precise control of the clip

Small retaining ring on the clip arm

ENSURE

FORCEPS FOR SAFE COAGULATION

MICRO-TECH ENSURE Coagulation Forceps are designed to assist physicians in effectively coagulating bleeding sites during interventional endoscopic procedures. They allow the user to securely grasp vessels and cut or coagulate them using HF power connection. Bleeding vessels can be reliably staunched during and after endoscopic submucosal dissection, without harming the surrounding tissue. This is ensured by the

well-grooved jaws of the forceps. They ensure a secure grip and prevent slippage during coagulation. Thanks to the maximum opening width of up to 6.3 mm, even large lesions can be coagulated. Precise and comfortable operation is ensured by the ergonomic handle, which enables reliable rotation of the forceps. In addition, the bidirectional HF power connection ensures more comfortable handling during the procedure.

SPECIFIC CHARACTERISTICS

- For effective hemostasis during ESD and EMR
- Secure, non-slip hold
- Reliable rotation
- 360° bidirectional rotation of the HF power connection
- Opening width 6.3

Ergonomic 3-ring handle with soft grip and 360° HF power connection

DISTAL CAPS

CLEAR VIEW FOR CLEAR RESULTS

The 4 mm distal caps provide an optimal field of view during therapeutic procedures and diagnostics. The transparent material allows a clear view and provides a reliable grip on the endoscope. The soft material is ideal for

smoothing mucosal folds. Surrounding or affected tissue is thus protected. The distance between the endoscope and the mucosa makes the distal cap ideal for a range of endoscopic procedures.

SPECIFIC CHARACTERISTICS

- Optimized view through transparency
- Side opening for pressure equalization and also for draining liquids
- Facilitates detection
- Secure grip on the endoscope
- Atraumatic, distal cap edge

VERSATILE APPLICATIONS

- ESD
- EMR
- Zenker
- Hemostasis
- Colonoscopies

INJECTION NEEDLE

RELIABLE AND SAFE TO THE TIP

MICRO-TECH's disposable injection needle facilitates clinical practice due to its ergonomic handle and especially sharp needle. The anti-skid design guarantees convenient control with just one hand. For even more precise punc-

tures the handle can be locked in several stages. When the needle is released, it snaps back into the catheter to avoid damage to the working channel.

SPECIFIC CHARACTERISTICS

- Ergonomic anti-slip handle
- Adjustable pressure pad
- Automatic needle-feed
- Soft, atraumatic silicone head
- Needle with extremely sharp, precision cut
- Different needle diameters
- LL needle connector

Needle completely retracted

Compact ergonomical design

PROTRAP LUMA

FOR GREATER CLARITY DURING POLYP REMOVAL

With MICRO-TECH's inline polyp trap, removing polyps larger than 1 mm is particularly safe and easy. The unique design enables non-contact sampling and is gentle on the polyp. The extracted polyp is collected in the sample

tray and can be viewed in detail through the built-in magnification window. To collect several samples, the sample tray can be quickly and easily exchanged, with no loss of suction power.

SPECIFIC CHARACTERISTICS

- Removable drip tray
- Magnification window
- Ergonomic design
- Easy to use
- Tightly sealed for safe suction
- Light stick for better polyp visibility

ProTrap Luma consists of a tube, trap body, collection sieve and light stick

The trays capture the polyps, are easily replaceable and fit into a standard sample cup

NETS

SAFELY REMOVE FOREIGN BODIES AND POLYPS

The MT net has been developed for the removal of polyps and foreign bodies and enables the reliable recovery of tissue samples. The net itself consists of a reinforced thread

material, which offers additional safety during recovery. Thanks to its unique dimensional stability and large opening, it facilitates work over several passes

SPECIFIC CHARACTERISTICS

- Large net
- High quality manufacture
- Comfortable 3-ring handle
- Easy and precise opening

Shape stable MT net
